Art Unit: 1752

This application is before the examiner for consideration on the merits.

I. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sato et al (5,985,525) considered in view of Tani et al (5,300,404).

Sato et al disclose, teach and suggest a developer composition and its use. The composition comprising an organic quaternary ammonium base and ammonium salt(s) of alkyl diphenyl ether sulfonic acid(s). Please see the whole disclosure of each of the applied references, especially in Sato et al at col.2:11 to 3:55, 4:35-60, 5:12-16 and Examples.

Sato et al discloses, teach and suggest an inclusion of known additives but fail to specify a low alcohol and its amount. However, it is known in the art to use about 5% of a low alkyl alcohol in a developing solution of the advantage of obtaining high wetting property, high penetration power, improving sensitivity and

peeling off prevention as disclosed, taught, suggested and demonstrated in Tani et al at col.4:1-36, 5:58 and 9:21-27.

Since the above references are generally related to developer, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use, include or cited the use of a low alkyl alcohol for a reasonable expectation obtaining the advantages of high wetting property, high penetration power, improving sensitivity and peeling off prevention as disclosed, taught, suggested and demonstrated in Tani et al.

II. Tanaka et al (5,543,268 and 6,329,126) are cited to show the state of the art.

III. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hoa V. Le whose telephone number is 571-272-1332.

The examiner can normally be reached from 6:30 AM to 4:30 PM on Monday through Thursday and about the same time of most Friday.

Art Unit: 1752

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cynthia Kelly can be reached on 571-272-1526.

Applicants may file a paper by (1) fax with a central facsimile receiving number 571-273-8300. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
